

# COATING SOLUTIONS FOR PERFORMANCE & AESTHETICS

## IMPROVE PART INSTALLATION AND ENHANCE AESTHETICS

A slip coating can elevate seal performance as well as aid in the installation of rubber or plastic extrusions. The coating process is performed in-line with the polymer extrusion, making it a cost-effective way to add value to our customers' products. Cooper Standard Industrial and Specialty Group (ISG) has the ability to coat an entire sheet, or a localized area, for your specific application requirements.

## COATINGS FOR UNIQUE APPLICATION DEMANDS

Cooper Standard ISG offers assembly aid coatings, performance coatings and high abrasion coatings that can meet unique application demands.

### ASSEMBLY AID COATINGS

- Reduced Friction During Installation Processes  
(Such as Sliding a Part into a Channel)
- Applied as a Thin Film
- Low Solids Content
- Available in Clear Only

*Not intended to resist abrasion.*

### HIGH ABRASION COATINGS

- Extend Part Life in Applications with Continuous Wear or Shear
- High Solids Content
- Available in Clear & Black

### PERFORMANCE COATINGS

- Good Abrasion Resistance & Coefficient of Friction
- Balanced Properties Suitable for Many Applications
- High Solids Content
- Available in Clear & Black
