

CURTAIN WALL SEALING SOLUTIONS

SEALING SYSTEMS FOR CURTAIN WALL APPLICATIONS

From compatible materials to efficient installation, Cooper Standard Industrial and Specialty Group (ISG) designs sealing solutions to perform in a range of curtain wall applications. Meeting the demands of architects requires paying attention to more than form, fit and function. We engineer components that protect against the elements and satisfy architectural design specifications.

MATERIAL ADVANTAGE

Our expertise in sponge, dense, rigid and flexible materials delivers high-quality components and advanced design capabilities.

CAPABILITIES INCLUDE:

- Rubber & Plastic Materials
- R&D Test Lab
- Color Matching
- Vertically Integrated Material Mixing

VERSATILE DESIGN

Our engineers evaluate factors such as assembly processes, compression requirements and seismic conditions to ensure ongoing performance of a sealing system. Because corners present the greatest risk for leaks, we pay special attention to this design element.

CAPABILITIES INCLUDE:

- Molded Corners & Frames
- Extrusion & Molding Processes
- In-house Tool & Die Development
- Co-extruded Materials
- 3D Modeling & FEA Analysis
